From the beginning of the systematic study of the heavens, the fact has been recognized that the form of the Milky Way denotes the scheme of the sidereal system. At first it was thought that the shape of the system was that of a vast round disk, flat like a cheese, and filled with stars, our sun and his relatively few neighbors being placed near the center. According to this view, the galactic belt was an effect of perspective; for when looking in the direction of the plane of the disk, the eye ranged through an immense extension of stars which blended into a glimmering blur, surrounding us like a ring; while when looking out from the sides of the disk we saw but few stars, and in those directions the heavens appeared relatively blank. Finally it was recognized that this theory did not correspond with the observed appearances, and it became evident that the Milky Way was not a mere effect of perspective, but an actual band of enormously

From the beginning of the systematic study of the heavens, the fact has been recognized that the form of the Milky Way denotes the scheme of the sidereal system. At first it was thought that the shape of the system was that of a vast round disk, flat like a cheese, and filled with stars, our sun and his relatively few neighbors being placed near the center. According to this view, the galactic belt was an effect of perspective; for when looking in the direction of the plane of the disk, the eye ranged through an immense extension of stars which blended into a glimmering blur, surrounding us like a ring; while when looking out from the sides of the disk we saw but few stars, and in those directions the heavens appeared relatively blank. Finally it was recognized that this theory did not correspond with the observed appearances, and it became evident that the Milky Way was not a mere effect of perspective, but an actual band of enormously

С самого начала систематического изучения неба был признан тот факт, что форма Млечного Пути обозначает схему сидерической системы. Сначала считалось, что система имеет форму огромного круглого диска, плоского, как сыр, наполненного звездами, причем наше Солнце и его относительно немногочисленные соседи расположены ближе к центру. Согласно этой точке зрения, галактический пояс возник в результате перспективы; ибо, глядя в направлении плоскости диска, взгляд просматривал огромное пространство звезд, которые сливались в мерцающее пятно, окружающее нас, как кольцо; В то время как, глядя по бокам диска, мы видели лишь несколько звезд, и в этих направлениях небо казалось относительно пустым. В конце концов было признано, что эта теория не соответствует наблюдаемым явлениям, и стало очевидно, что Млечный Путь был не просто эффектом перспективы, а настоящей полосой чрезвычайно далеких звезд, образующих круг вокруг сферы, центрального отверстия. Кольцо
